Mequon Road Town Center Work Update

We Energies is currently performing a project along the Mequon Road corridor to bury electrical lines on the south side of Mequon Road and near the City Hall driveway. The electrical burial project is currently scheduled to conclude in late summer. Additionally, the City's Mequon Road/OIT Crossing Improvements Project has a few items left for completion in 2024, including the following:

- Landscape plantings and restoration
- Median light installation
- Monument sign installation
- Electrical and traffic signal underground work

- Activation of the new Weston Drive traffic signals

Most work will be completed this summer. Some electrical and signal work will be completed in late summer 2024 in coordination with WisDOT and the Railroad for activation of the Weston Drive traffic signals. Since the new Weston Drive signals are near the railroad, special safety and timing features need to be set up by the railroad prior to their full operation.

Sanitary Sewer System Bypass Pumping Occurrence on June 3

Starting at 7:45 P.M. on Monday, June 3 until 1:45 A.M. on Tuesday, June 4, a series of wet weather events resulted in inflow and infiltration of clear water into the City’s sanitary sewer system. This resulted in surcharging within the sanitary sewer system. Wastewater staff monitored the flow throughout the evening and ultimately bypass pumped at Lift Station H (2932 Riverland Drive). Given the timeline of the bypass and the location of the lift station within the Milwaukee River watershed, which is in close proximity to the river, exposure to the public was limited. Bypass pumping at lift stations is a mitigation strategy to reduce or eliminate sewage backups into basements, which appeared to be successful for this event. Wastewater staff will file the appropriate compliance documents with the WDNR and continue to implement capital projects to further reduce the risk of sanitary sewer overflows.
